1. **Course number and name**  
   ENGR 356 Digital Design

2. **Credits and contact hours**  
   3 credit hour; Three 50-minute lecture session/week

3. **Instructor’s or course coordinator’s name**  
   Instructor: Hamid Shahnasser, Professor of Electrical and Computer Engineering  
   Course coordinator: Hamid Shahnasser, Professor of Electrical and Computer Engineering

4. **Text book, title, author, and year**  
   M. Morris Mano & Michael D. Ciletti, Digital Design with an Introduction to the Verilog HDL, Fifth Ed

   a. **References**  
      3. Daniels, J., Digital Design from Zero to One.  

5. **Specific course information**  
   a. **brief description of the content of the course (catalog description)**  
      Number systems. Design of combinational and sequential logic circuits. Digital functional units such as adders, decoders, multiplexers, registers and counters. Micro-operations and register transfer language. Instruction format and execution. Memory organization. Datapath, control Units, Computer I/O and peripheral devices, time permitting.

   b. **prerequisites or co-requisites**  
      ENGR 205 or CS210 with a grade of C- or better

   c. **indicate whether a required, elective, or selected elective course in the program**  
      Required for Electrical Engineering; elective for Computer Engineering.

6. **Specific goals for the course**
a. specific outcomes of instruction, ex. *The student will be able to explain the significance of current research about a particular topic.*
   - The student will demonstrate an ability to analyze combinational and sequential circuits.
   - The student will demonstrate an ability to design combinational and sequential circuits.
   - The student will demonstrate the skill of using software tools.
   - The student will demonstrate an ability to implement Digital Design circuit as a course project.

b. explicitly indicate which of the student outcomes listed in Criterion 3 or any other outcomes are addressed by the course.
   Course addresses ABET Student Outcome(s): a, e, i, j, k.

7. Brief list of topics to be covered
   - Digital Systems and Binary information
   - Boolean Algebra and Logic Gates
   - Gate Level minimization
   - Combinational logic
   - Synchronous Sequential Logic
   - Registers and Counters
   - Memory and Programmable Logic
   - Design at Register Transfer Logic
   - Additional Topics, time permitting
